Title:

A "stubborn plantar wart" which normally takes up to three years to heal was resolved in three weeks by D A Marine Mineral.

1. Overview:

In mid-April 2020, a wart appeared on the right second toe. By the end of April, a doctor confirmed it was a stubborn toe wart that typically takes three years to heal on its own. In early June, the user began using D A Marine Mineral Drops, one drop every other day, and after three weeks, the wart fell off on its own.

3. User complaints and objective medical evidence before using D A

Marine Mineral:

User complaints: In mid-April 2020, a lump-like foreign body grew on the bottom of the right second toe, which was hard, painful, and aggravated by water. Two weeks later, the lump grew larger and harder and became more painful, "painful to the extreme".

Due to the first wave of COVID epidemic in North America at that time, people avoided going out. At the end of April, the user chose to consult a doctor online and confirmed that it was a toe wart caused by human papillomavirus (HPV) infection. The doctor pointed out that this type of wart is not contagious, but is stubborn and also known as a "thousand-day wart", which takes about three years for the wart to heal on its own.

第1次提问

脚上突然长了这个东西，硬硬的，有点痛，洗澡时碰到水会更明显。第一张图是两周前，并不是长得特别大。第二张图是用手抠破了，然后第三第四张图是最近两天拍的，这个疙瘩越来越突出了！越来越大！请问到底是什么呢？应该怎么办处理呢？

寻常疣，是一种HPV病毒感染，也成人类乳头瘤病毒。每个人皮肤表面都有这种病毒，您不用担心，它一般不会致病，一旦您这段时间熬夜：休息不好，抵抗力下降它就是大量繁殖，引发寻常疣。

您睡觉用脚接触到先生不会传染给他，袜子在一起洗也不会传染，请您放心。

这个病也称：“千日瘕”，一千天可以自愈，也就是三年左右的时间，但是前提是您要生活规律，不然会引发新的寻常疣。

Translation of the online consultation dialogue between the user and a doctor:

Case Report of Users

The user provided four photos and asked the doctor:

"There's this thing that suddenly grew on my foot. It's hard and a bit painful. It becomes more obvious when it touches water during a shower. The first picture was taken two weeks ago, and it wasn't very big. The second picture shows that I scratched it open. The third and fourth pictures were taken recently, and the lump has become more prominent and bigger! What exactly is it? And how should I deal with it?"

The doctor diagnosed and replied:

"This is a common wart, which is caused by the human papillomavirus (HPV) and also known as adult genital warts. Everyone's skin surface carries this virus, so there's no need to worry. Generally, it won't cause any harm. However, if you don't rest well or have a weak immune system, the virus may reproduce rapidly and cause common warts.

You won't transmit the virus to your spouse while sleeping, and washing your socks together won't transmit it either, so please don't worry.

Common warts, also known as "perennial warts," can heal themselves in about a thousand days, or about three years, but only if you maintain a regular and healthy lifestyle. Otherwise, it may cause new common warts."

4. User's Description of the Process of Using D A Marine Mineral (Product, Dosage, Usage, Execution Time, etc.):

In May 2020, the user's foot wart continued to develop and became increasingly painful. Seeking help, the user tried D A ionic marine mineral drops directly on the wart, with an average of one drop every two days. After 23 days about three weeks, the wart lost its activity and fell off on its own.

Note: During the use of D A Marine Mineral, were any other health therapies implemented?

No other therapies were used during the period of using D A Marine Mineral.

6. Summary:

Under normal circumstances, plantar warts caused by HPV virus infections usually take about three years to heal on their own. After using D A Marine Mineral, the surrounding normal tissue growth was efficiently promoted, and the warts fell off and healed within three weeks. As of February 2023 follow-up, the user updated that the warts have not recurred since healing in 2020.
